E-Commerce DBMS

Data and Applications

Project Phase – 3

Improvements in ER Model and the System in General

1. Added Component Street Name to Address attribute .
2. Removed Supervisor attribute from Employee relation .
3. Removed Composite attribute Name from Customer and Employee.

ER Model to Relational Model

Step1: Mapping of Regular Entity Types

Customer	
PK	<u>CustomerID</u>
	<u>Email</u>
	FirstName
	LastName
	D.O.B
	Gender
	Age
	Pin
	State
	Country
	Street_Name
	Phone_Number

Product	
PK	<u>Product_ID</u>
	Discount
	Final Price
	Price_Per_Item
	Current_Stock
	Supplier_ID
	Product_Name

SECURITY	
PK	<u>Employee_ID</u>
	Security_Company
	Years_Of_Experience

TECHNICIAN	
PK	<u>Employee_ID</u>
	Project_Name

Department	
PK	<u>Department_Name</u>
	Number_Of_Employee

ORDER	
PK	<u>Customer_ID</u>
	Order_ID
	Product_ID
	Order_Quantity

Delivery Agent	
PK	<u>Agent_ID</u>
	Agent_Name

Employee	
PK	<u>Employee_ID</u>
	<u>Email</u>
	Supervisor
	Salary
	Gender
	FirstName
	LastName
	D.O.B
	Age
	Employement_Status
	Department_Name
	Joining_Date
	Pin
	State
	Country
	Street_Name

SUPPLIER	
PK	<u>Supplier_ID</u>
	<u>Email</u>
	Company_Name
	Contract_Date
	Address
	Phone_Number

For each regular (strong) entity type in the ER schema, we created a relation that includes all the simple attributes of the Entity. For Composite Attributes, only the simple attributes were included. For example: In Customer and Employee Relations Address was converted to Address, Pin Code, State , Country and Street Name .

Step 2: Mapping Of Weak Entity types

Feedback	
PK	<u>Product_ID</u>
FK	<u>Customer_ID</u>
	Comment
	Rating

Tracking Detail	
PK,FK	<u>ORDER_ID</u>
	Agent_ID
	Shipped_From
	Shipped_To
	Estimated_Delievery

For each weak entity type W in the ER schema with owner entity type E, relation R is created which includes all simple attributes (or simple components of composite attributes) of W as attributes of R. Each Relation includes the primary key of owner Entity as a foreign key.

Step 3: Mapping of Binary 1:1 Relationship Types

For ‘MANAGES’ Binary 1:1 Relationship type in the ER schema, the primary key of Employee i.e. Employee_ID was added as a foreign key attribute Manager_ID to the Department.

Employee	
PK	<u>Employee_ID</u>
PK	<u>Email</u>
FK	<u>Department_Name</u>
	Salary
	Gender
	FirstName
	LastName
	D.O.B
	Employement_Status
	Joining_Date
	Age

Department	
PK	<u>Department_Name</u>
FK	<u>Manager_ID</u>
	Number_Of_Employee

Step 4: Mapping of Binary 1:N Relationship Types

Relationships:

1. **Supervision** : Primary Key of supervisor (Supervisor_ID) was added to Employee (Supervisee) .
2. **Works_For** : Primary Key of Department (Department_Name) already existed in Employee .
3. **Review** : Since Tracking Detail is weak attribute of Order and so the primary key of Order (Order_ID) is already present in Tracking Detail .
4. **Tracked_By** : Primary Key of Order (Order_ID) was made a foreign key in Tracking_Detail .

Employee	
PK	<u>Employee ID</u>
PK	<u>Email</u>
FK	<u>Supervisor ID</u>
FK	<u>Department Name</u>
	Salary
	Gender
	FirstName
	LastName
	D.O.B
	Employment_Status
	Joining_Date
	Age

ORDER	
PK	<u>Customer ID</u>
	Order_ID
	Product_ID
	Order_Quantity

Department	
PK	<u>Department Name</u>
FK	<u>Manager ID</u>
	Number_Of_Employee

Customer	
PK	<u>CustomerID</u>
PK	<u>Email</u>
	FirstName
	LastName
	D.O.B
	Gender
	Age

Tracking Detail	
PK,FK	<u>ORDER ID</u>
	Agent_ID
	Shipped_From
	Shipped_To
	Estimated_Delivery

Feedback	
PK	<u>Product ID</u>
FK	<u>Customer ID</u>
	Comment
	Rating

Step 5: Mapping of Binary M:N Relationship Types

No Such Relationship Exists in our ER Model.

Step 6: Mapping of Multivalued Attributes

For Multivalued Attributes such as Phone Number and Address, we created new Relations and removed these attributes from the Relations Employee, Customer and Supplier.

Customer_Phone_Number	
FK	<u>Customer ID</u>
PK	<u>Phone_NO</u>

Employee_Phone_Number	
FK	<u>Employee ID</u>
PK	<u>Phone_NO</u>

Supplier_Phone_Number	
FK	<u>Supplier ID</u>
PK	<u>Phone_NO</u>

Customer_Address	
FK	<u>Customer ID</u>
	Pin
	State
	Country
	Street Name

Employee_Address	
FK	<u>Employee ID</u>
	Pin
	State
	Country
	Street Name

Supplier_Address	
FK	<u>Supplier ID</u>
	Address

Step 7: Mapping of N-ary Relationship Types

A new relation Supply is made for Supply 4-ary Relationship which includes the primary key of Customer , Delievery Agent , Supplier and Order .

Supply	
FK	<u>Customer_ID</u>
FK	<u>Order_ID</u>
FK	<u>Agent_ID</u>
FK	<u>Supplier_ID</u>

Step 8 : Mapping Specialization or Generalization

Technician and Security were the disjoint subclasses of Employee and already contained primary key of Employee (Super Class) .

Since all the conditions were satisfied , no changes were made.

SECURITY	
PK	<u>Employee_ID</u>
	Security_Company
	Years_Of_Experience

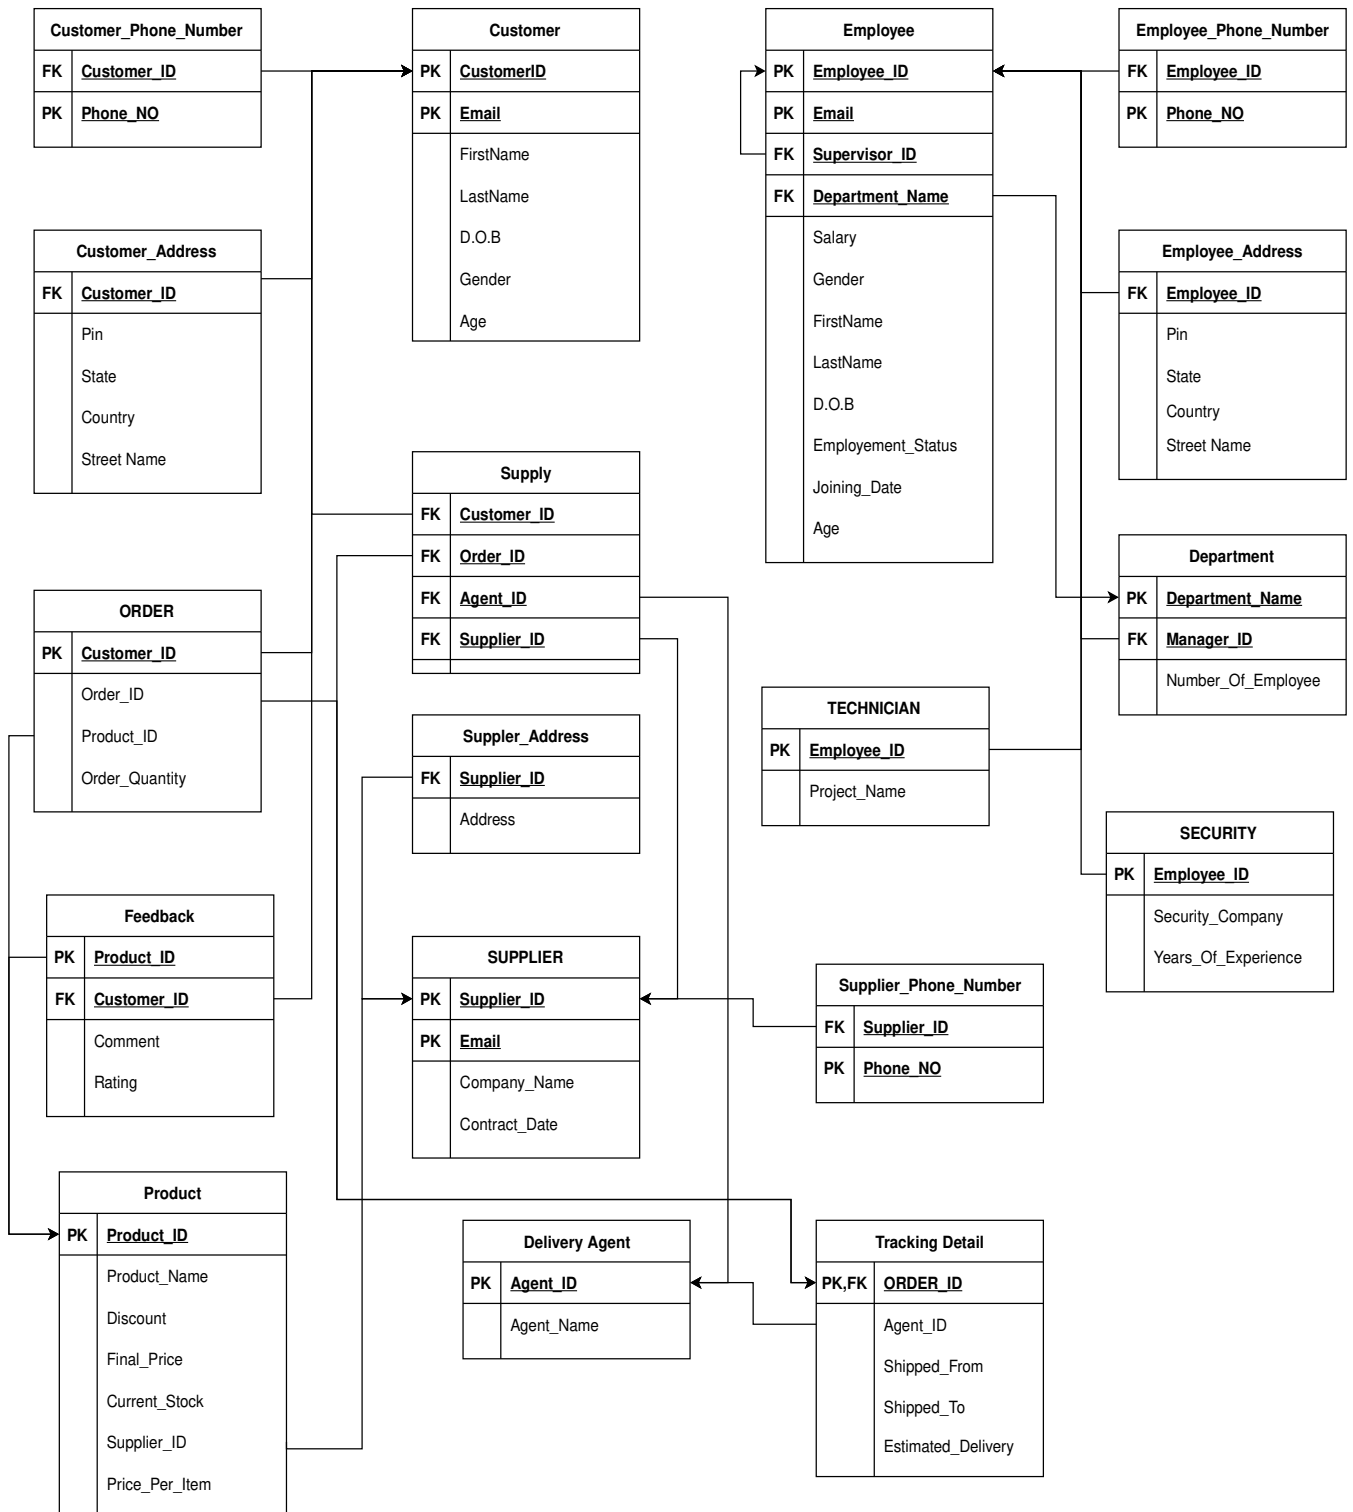

TECHNICIAN	
PK	<u>Employee_ID</u>
	Project_Name

Employee	
PK	<u>Employee_ID</u>
PK	<u>Email</u>
FK	<u>Supervisor_ID</u>
FK	<u>Department_Name</u>
	Salary
	Gender
	FirstName
	LastName
	D.O.B
	Employement_Status
	Joining_Date
	Age

Step 9: Mapping of Union Types (Categories)

No Union Type Existed in our Schema

The Relational Model Obtained from the ER

Conversion of Relational Model to 1NF

Already in 1NF

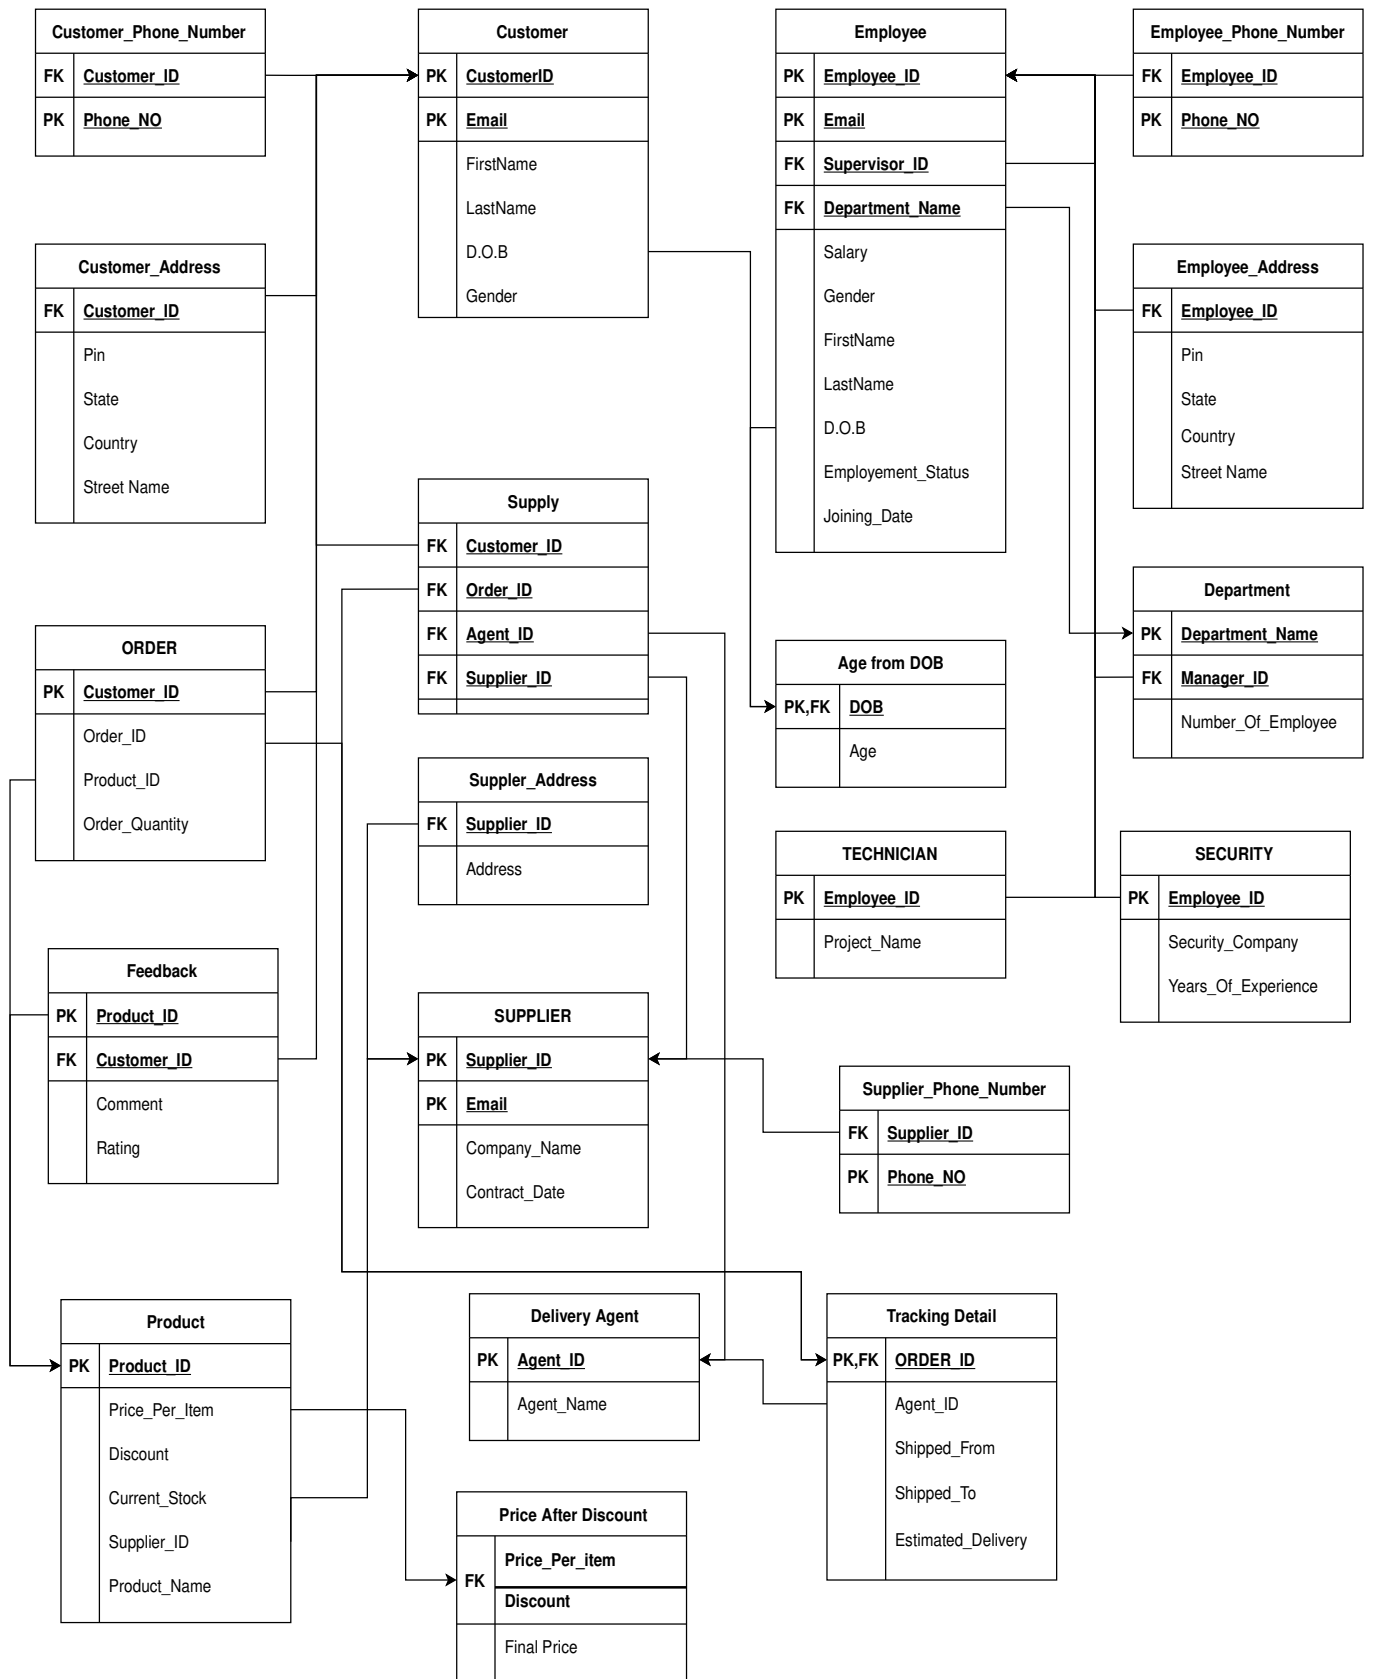

The relational model is already in 1NF as new relations for multivalued attributes were created in Step 6 and Composite attributes were converted to atomic attributes in Step 1.

Conversion of 1NF Relational Model to 2NF

Already in 2NF

The relational model is already in 2NF as all of its primary keys have exactly one attribute. Also it does not have any non-prime attribute that is functionally dependent on any proper subset of any candidate key of the relation.

Conversion of 2NF Relational Model to 3NF

Example Tuples for Each Relation to Show a Consistent State of the Final Relational Model

Entity Type	Attribute	Tuple 1	Tuple 2
Customer	Customer_ID	1111111	2222222
	First_Name	Utkarsh	Bhaskar
	Last_Name	Upadhyay	Joshi
	D.O.B	17/07/2001	24/12/2001
	Gender	Male	Male
	Email	utkarsh@gmail.com	bhaskar01@gmail.com
Customer_Address	Customer_ID	1111111	2222222
	Pin	12345	54321
	State	Rajasthan	Rajasthan
	Country	India	India
	Street_Name	B-13,Malviya Nagar	6-F,Vigyan Nagar
Customer_Phone Number	Customer_ID	1111111	2222222
	Phone_Number	9999999999	8888888888
